

MANTA RAY

Mobula birostris

- Manta rays are very large, diamond-shaped rays that are usually dark black on the top and white with occasional spots underneath
- Manta rays have unique flaps on either side of their mouths that help funnel delicious plankton that they love to eat
- Manta rays are thought to live up to 40 years old

FUN FACT: There are several species of manta rays, the largest is the oceanic manta ray that could reach up to 22 feet measured between wing tips!
